

CSKR
Countersunk Raised Head

Panelvit® FR
BRAKING SCREW

Screw for fixing hardware for furniture and handles due to the **slightly rounded profile of its head**.

Braking ribs below the head to ensure a stop due to friction during the tightening phase, thus preventing stripping of the material. Locking of the head ensures greater resistance to unscrewing and a high tear resistance.

Ogive-shaped tip threaded right to the end to penetrate into the material, deforming it gradually **without causing any splits** and avoid damaging the laminated finishing layer.

CARBONITRIDING HEAT TREATMENT

This confers two properties to the screw:

- **very hard surface**, for biting into the fibres of the hardest wood;
- **tough, elastic core**, needed to avoid breakage of screws.

BRASS PLATING GALVANIC TREATMENT

The aesthetic treatment of **Brass plating** matches the colour of the hardware elements to be fixed.
